Sweet Crumbs Bakery

- Capstone 27: AI Business Plan Draft Assistant
- Question: can AI write a first-draft business plan, and which parts are most likely to be wrong?
- Fictional business: a small neighbourhood bakery near a college
- Presented by Arsha J Albert

Market

- Customers: college students, nearby families, office workers
- Need: fresh, affordable baked goods close to home
- Competition (assumed): two small bakeries and a supermarket counter
- Our edge: baked fresh daily, student deals, custom cakes

Offer and Operations

- Bread, cakes, cookies, snacks and custom birthday cakes
- 400 sq ft shop, open 7 am to 9 pm, 26 days a month
- Team of 3 plus the owner
- Setup cost Rs. 6,00,000

Marketing

- Instagram and WhatsApp for daily specials and cake orders
- Student card: 10% off on weekdays
- Bulk orders through college clubs and offices
- Budget: Rs. 8,000 a month

Financials (Base Case)

- 80 customers a day x Rs. 140 x 26 days = Rs. 2,91,200 sales a month
- Net profit about Rs. 41,720 a month (margin about 14%)
- Break-even: about 61 customers a day
- Setup cost payback: about 14.4 months

What AI Got Wrong

- First draft claimed a 45% margin and break-even in month 2
- Market figures had no source; some totals did not add up
- We rechecked every number and labelled assumptions
- Lesson: AI is a good first draft, not a final answer
