Business Plan Draft: Sweet Crumbs Bakery

Capstone 27 - AI Business Plan Draft Assistant | Arsha J Albert

1. Executive Summary

Sweet Crumbs Bakery is a fictional small neighbourhood bakery near a college and residential area. It sells fresh bread, cakes, cookies and snacks, and takes custom birthday cake orders. It competes on fresh daily baking, affordable prices and student deals. The plan assumes a setup cost of Rs. 6,00,000 and monthly operating profit from a base of 80 customers a day.

2. Market

- **Target customers:** college students, nearby families and office workers.
- **Customer need:** fresh, affordable baked goods close to home. Competitors are packaged brands or higher-priced cafes.
- **Competition (assumed):** two small bakeries and a supermarket bakery counter.
- **Our edge:** baked fresh each morning, student combo deals, custom cakes ordered on Instagram or WhatsApp.

3. Operations

- 400 sq ft shop with a small baking area; open 7 am to 9 pm, 26 days a month.
- Team of 3: head baker, assistant, counter staff, plus the owner.
- Ingredients bought weekly from local wholesalers; bread baked every morning, cakes on order.
- Equipment: oven, mixer, display counter, fridge, billing system.

4. Marketing

- Instagram and WhatsApp for daily specials and cake orders.
- Opening-week discount and a student card (10% off on weekdays).
- Tie-ups with college clubs and nearby offices for bulk orders.
- Google Maps listing with photos and reviews. Budget: Rs. 8,000 a month.

5. Financial Outline

Item	Base case
Customers per day	80
Average order value	Rs. 140
Monthly sales	Rs. 2,91,200
Ingredients and packaging (40%)	Rs. 1,16,480
Fixed costs per month	Rs. 1,33,000
Net profit per month	Rs. 41,720 (about 14%)
Break-even	About 61 customers a day

Item	Base case
Setup cost payback	About 14.4 months

Full workings are in the Revenue Model document.

6. Risks and Assumptions

- All figures are assumptions for a fictional business, not real data.
- Customer numbers may be lower in exam and holiday months; at 60 customers a day the bakery makes a small loss.
- Ingredient prices can rise; every 1 percentage point rise in ingredient cost lowers monthly profit by about Rs. 2,912.
- Market growth, competitor count and licence time are unverified and marked as assumptions.
