Prompt Library, Before/After Analysis and Time Comparison

Sweet Crumbs Bakery | Arsha J Albert

1. Prompt Library

#	Purpose	Prompt
1	Executive summary	Write a 150-word executive summary for a fictional small bakery near a college. Include the target customers, what makes it different and the setup cost of Rs. 6,00,000.
2	Market	Describe the market for a small neighbourhood bakery near a college in India. Mark every statistic as 'verified' or 'assumption' and do not invent numbers.
3	Operations	List the daily operations, staff roles and equipment for a 400 sq ft bakery with 3 staff, in simple bullet points.
4	Marketing	Suggest a low-budget marketing plan (under Rs. 8,000 per month) for a small bakery using Instagram, WhatsApp and college tie-ups.
5	Financial outline	Create a simple monthly revenue and cost outline for a small bakery. Show formulas. State all assumptions clearly.
6	Self-check	List every number and claim in the plan above that could be wrong or unverified, and say how to check each.
7	Deck	Turn this business plan into a 6-slide deck outline with a title and 3 bullet points per slide.

Tools: ChatGPT, Gemini and Claude (free) for drafting and cross-checking; Google Sheets for numbers; Gamma for the deck.

2. Time Comparison

Drafting time per section, without AI and with AI (student-reported).

Section	Without AI	With AI	Time saved
Executive summary	1.5 hours (90 min)	5 min	85 min
Market	1 hour (60 min)	30 min	30 min
Operations	2 hours (120 min)	10 min	110 min
Marketing	3 hours (180 min)	5 min	175 min
Financial outline	1 hour (60 min)	2 min	58 min
Total	**510 min (8.5 hours)**	**52 min**	**458 min (about 90%)**

Finding: AI cut drafting time from about 8.5 hours to about 52 minutes. Checking the numbers and claims is a separate task covered in the Error Log and Verification Report.

3. Before / After Analysis

Area	First AI draft (before)	After checking (after)
Profit margin	About 45%	About 14%
Break-even	Month 2	61 customers a day; payback 14.4 months
Customers	500 a day from ads	80 a day (range 60 to 100)
Market statistics	Confident figures with no source	Marked as assumptions
Table totals	Some did not add up	All recalculated
Tone	Very confident and promotional	Realistic, risks stated

Key Findings

- The most error-prone parts are the financials and the market statistics.
- AI writes confidently even when figures are invented, so every figure must be checked.
- Best use of AI: fast first draft, structure and wording. People must verify numbers and assumptions.
