Revenue Model: Sweet Crumbs Bakery

Simple monthly model (can be copied into Google Sheets)

1. Assumptions

Assumption	Value
Customers per day (base)	80
Average order value	Rs. 140
Days open per month	26
Ingredients and packaging (% of sales)	40%
Rent	Rs. 35,000
Salaries (3 staff)	Rs. 70,000
Utilities	Rs. 12,000
Marketing	Rs. 8,000
Other expenses	Rs. 8,000
Total fixed costs	**Rs. 1,33,000**
Setup cost (one time)	Rs. 6,00,000

2. Scenarios

Item	Low (60/day)	Base (80/day)	High (100/day)
Monthly sales	Rs. 2,18,400	Rs. 2,91,200	Rs. 3,64,000
Ingredient cost (40%)	Rs. 87,360	Rs. 1,16,480	Rs. 1,45,600
Gross profit	Rs. 1,31,040	Rs. 1,74,720	Rs. 2,18,400
Fixed costs	Rs. 1,33,000	Rs. 1,33,000	Rs. 1,33,000
Net profit per month	**Rs. -1,960**	**Rs. 41,720**	**Rs. 85,400**

3. Key Results

- **Break-even sales:** Rs. 1,33,000 / 0.60 = about Rs. 2,21,667 a month (about 61 customers a day).
- **Net margin (base):** Rs. 41,720 / Rs. 2,91,200 = about 14.3%.
- **Payback of setup cost (base):** Rs. 6,00,000 / Rs. 41,720 = about 14.4 months.

4. Google Sheets Layout and Formulas

Type the labels in column A and values or formulas in column B.

Cell	Label	Value / formula
B1	Customers per day	80
B2	Order value (Rs.)	140
B3	Days open	26
B4	Ingredient cost %	0.40
B5	Fixed costs (Rs.)	133000
B6	Setup cost (Rs.)	600000
B8	Monthly sales	=B1*B2*B3
B9	Ingredient cost	=B8*B4
B10	Gross profit	=B8-B9
B11	Net profit	=B10-B5
B12	Net margin	=B11/B8
B13	Break-even sales	=B5/(1-B4)
B14	Break-even customers per day	=B13/(B2*B3)
B15	Payback (months)	=B6/B11

Check: with the values above, B8 = 2,91,200, B11 = 41,720, B13 = 2,21,667 and B15 = 14.4. Change B1 to 60 or 100 to reproduce the low and high scenarios.
Sensitivity: each Rs. 10 change in average order value moves monthly net profit by about Rs. 12,480 (80 x 26 x 10 x 0.60).
